

XGB energy prediction for oncogene vs. non oncogene: not an important feature solely.

Equal Variance t-test p-value: 0.33569

Unequal Variance t-test p-value: 0.33958

Kruskal-Wallis p-value: 0.31031

Wilcoxon Rank-Sum test p-value: 0.31043

This shows that energy can't distinguish oncogenes from non oncogenes, and so we need circuit topology.
